Ivip (Internet Vastly Improved Plumbing) Conceptual Summary and Analysis

The document at this location was useful for explaining Ivip until I created a completely rewritten Ivip-arch ID in early 2010.

Please refer to this ID:

  http://tools.ietf.org/html/draft-whittle-ivip-arch

for the best description of Ivip, its goals and non-goals etc.

Version 03 doesn't cover the new DRTM (Distributed Real Time Mapping) system, which is described in:

  http://tools.ietf.org/html/draft-whittle-ivip-drtm

Please be sure to read about DTRM, which is very different from previous approaches.

For a summary of why I think Ivip is the best choice for the RRG to recommend for further IETF development, please see:

  http://www.ietf.org/mail-archive/web/rrg/current/msg06162.html
