

## DPS12 V2.11 Operating System Upgrade

This is to announce the release of V2.11 operating system for the DPS12 Digital Personal Studio.

### [Improvements]

1. Reloading multiple disk backups - When reloading backup data that is larger than the remaining capacity of the destination hard disk, previous OS versions would display a warning message saying "can not be reloaded more", however the operation would continue if the user inserted the next disk. This has been corrected so that V2.11 will show "OOPS Not enough space to load. Erase some unnecessary data" when restoring a backup that is larger than the destination disk.
2. Pressing UNDO may cause a "System Lock" if a CUT>DISCARD operation is performed on the current project, then another project is opened, then you go back to the original project. - *fixed*.
3. Performing a CUT>OVERWRITE edit on a very short region (less than 10 frames) could cause a "System Lock" - *fixed*.
4. Setting the Self-ID to ID 7 could cause a "System Lock" since this ID is reserved. This has been corrected in V2.11 so that the warning message "OOPS 77 This ID is already in use. Use another ID" will be displayed and the Self ID will be reset.
5. Restoring project backup data from DPS16 may cause "System Lock". - *fixed*.

**Note:** No manual addendum has been released with this upgrade since the enhancements did not significantly change the operation.

*For information on how to obtain the upgrade, check the Akai web site at <http://www.akaipro.com>, or contact your authorized Akai distributor.*
