

DR16pro V3.20 Operating System Upgrade

This is to announce the release of V3.20 operating system for the DR16pro Hard Disk Recorder.

[Improvements]

1.Improvements to Multi-machine sync- V3.11 had an intermittent problem that prevented a slave DR16pro from following or syncing correctly with the master DR16pro. The V3.2 update fixes the problems concerning Multi-machine sync operation.

Note 1. The SYNC IN/OUT terminator of the master DR16pro should be OFF, even though the DR16pro V3.11 Addendum Manual states that it should be ON in Multi-Machine Connections. A revised addendum manual will be issued soon.

Note 2: When you connect a RE32 with multiple DR16pro's using Multi-Machine sync operation, the RE32 should be turned ON after the DR16pro's boot up. Otherwise, the RE32 may show "Invalid Machine ID Assignments! Please check them and reboot.."

2. Problem of miss-triggering of Cues on one track - The DR16pro might randomly play a single cue out of sync on one track. This is corrected in V3.20.

*For information on how to obtain the upgrade, check the Akai web site at
<http://www.akaipro.com>, or contact your authorized Akai distributor.*
